

REFLECTIONS ON THE G-LAB PROJECT
EuroView 2012
12th Workshop on IP
23-24 July 2012

Peter A. Freeman
Emeritus Dean & Professor
(Former) Assistant Director, NSF

Georgia Tech College of Computing

REFLECTION 1:

The G-Lab Project was the right project at the right time.

Georgia Tech College of Computing

2

REFECTION 2:

The Project appears to have been well organized and managed.

REFECTION 3:

The choice of projects may not have been optimal.

REFECTION 4:

The primary benefit of the G-Lab Project is that it engaged a large number of people in thinking about the future of networking.

REFECTION 5:

The International Advisory Board was not well utilized.

OBSERVATIONS

- New developments are almost always based on work done previously.
- Results almost always take much longer to have impact than we imagine, but if they do it is often much greater than we could have imagined.
- Revolutionary developments usually happen in an environment in which thinking out of the box is rewarded, and in which there is little or no pressure to produce immediate, practical results.

THANK YOU!
